

COLOR

The NGINX logo should primarily be used in its 1-color (green) format when the background color is white. If the background color is dark or black, an all-white version of the logo is available. Likewise, if the logo can only be used in black and white, an all-black version of the logo is available.

CLEARSPACE

To maintain the integrity of the NGINX identity, keep a fixed amount of open space around the entire logo to help it stand out. An appropriate clearspace for the logo is equal to the size of the letter “G” and proportional to the size of the logo being used.

MINIMUM SIZES

For readability, do not size below these minimums.

COLOR

1-color standard NGINX logo White NGINX logo on dark color background Black and white NGINX logo only

CLEARSPACE

Why clear space? *When we place other design elements too close to the logo, it can sometimes suggest a relationship between them. Think of the logo as our signature. The more we keep it intact, the more recognizable and valuable it will be.*

MINIMUM SPACE

The NGINX logo should be no smaller than: .75 inches wide, 72 pix

COLOR

The NGINX Plus logo should primarily be used in its 2-color (green and orange) format when the background color is white. The logo uses the green corporate color (Pantone 355C or HEX 009639) and orange (Pantone Bright Orange C or HEX FF6600).

If the background color is dark or black, an all-white version of the logo is available. Likewise, if the logo can only be used in black and white, an all-black version of the logo is available.

CLEARSPACE

To maintain the integrity of the NGINX identity, keep a fixed amount of open space around the entire NGINX Plus logo to help it stand out. An appropriate clearspace for the logo is equal to the size of the letter "G" and proportional to the size of the logo being used.

MINIMUM SIZES

For readability, do not size below these minimums.
